

a²

7. (Amended) A composition according to claim 6, wherein the dimethacrylate oligomer is a dimethacrylate polyetherurethane oligomer.

a³

32. (Amended) A two part system comprising:

- a) a first part which comprises a curing agent; and
- b) a second part which comprises a curing agent synergist of the curing agent of the first part,

wherein the first part or the second part or both further comprises a compound having an unsaturation index of at least 500 and an adhesion promoter and wherein upon mixing of the first part and the second part, curing is achieved with a peak exotherm of less than about 50 °C (120 °F).

a⁴

43. (Amended) A composition according to claim 42, wherein the dimethacrylate oligomer is a dimethacrylate polyetherurethane oligomer.

a⁵

52. (Amended) A composition comprising a methacrylated polyetherurethane oligomer, capric/caprylic triglyceride, polycarbophil, camphorquinone, and ethyl-4-dimethylaminobenzoate.

a⁶

55. (Amended) A composition according to claim 52, wherein the composition comprises a methacrylated polyetherurethane oligomer in an amount from about 25 percent to about 98 percent by weight based on the total weight of the composition, capric/caprylic triglyceride in an amount from about 2 percent to about 50 percent by weight based on the total weight of the composition, polycarbophil in an amount from about 10 percent to about 50 percent by weight based on the total weight of the composition, camphorquinone in an amount from about 0.05 percent to about 0.30 percent by weight based on the total weight of the composition, and ethyl-4-dimethylaminobenzoate in an amount from about 0.1 percent to about 1.0 percent by weight based on the total weight of the composition.

Please add the following new claims:

56. (New) A composition comprising a curable unsaturated compound having less than about 40 % monomers, a curing agent and an adhesion promoter.

57. (New) A method of making a composition comprising the steps of:
selecting a curable unsaturated compound having an unsaturation index
of at least 500; and
mixing said curable unsaturated compound with a curing agent and an
adhesion promoter.

58. (New) The method of claim 57, wherein the curable unsaturated compound comprises less than about 40 % monomers.

59. (New) The method of claim 57, wherein the curable unsaturated compound is monomer-free.

REMARKS

Claims 1-55 are pending. Although the Office Action, page 1, refers to claims 1-56, Applicants believe this recital is incorrect since the application contained claims 1-55. Moreover, the Examiner's rejections only refer to claims 1-55. Applicants hereinabove amended claims 1, 7, 32, 43, 52, and 55. The amendments to the claims introduce no new matter. Applicants also have added claims 56-59. Addition of claims 56-59 introduces no new matter. Applicants have amended the specification to add the requisite paragraph to perfect their claim of priority. (see Corrected Filing Receipt, mailed March 2, 2001). Accompanying this Amendment is a submission pursuant to 37 CFR 1.121 (c)(1)(ii), which contains marked-up versions of the amended claims.
